

## Underwater Film Festival

by Lea Nichols

On Thursday, April 27th, several UDNH members comprising the group *New England Under Water* are going to be presenting an under water film festival. The presentation will start at 7:00pm at the Dana Center at St. Anselms College, Manchester.

Among the presentations are *Mirage* and *Thai Kaleidoscope*, as well as New England Under Water's portrayal of New England via six short stories, including: The shipwreck of the *Chester Polling* near Gloucester, Massachusetts; Swimming in an ice covered water fall in the White Mountains of New Hampshire; Diving under the ice on lakes in NH; Playing with seals in Acadia National Park, Maine; and Colorful, intricately shaped marine life.

All presentations are entertaining artistic interpretations of the marine environment and their terrestrial setting. Three slide projectors and synchronized sound tracks are used to create flowing transitions between images.

*Mirage* tells a story about Egypt and diving in the Red Sea. The program starts out in Cairo in the City of the Dead and visits the Great Pyramids in Giza. Then you fly over the Sinai Peninsula near where Moses is said to have been given the ten commandments. You then venture by boat to the Straights of Tiran and dive into the clear waters of the Red Sea to recover an ancient urn. The show exits Egypt through the Valley of the Kings.

*Thai Kaleidoscope* shows Thailand as the multi-cultural land it is, filled with friendly people worshipping a variety of spiritual beliefs. A person's head is the most revered part of their anatomy. Dirty feet are the lowliest part. It is impolite to point ones feet directly at another person. Thai culture pays tribute to a variety of spirits they share the land with. One house spirit lives under the threshold of the door to each house and temple. It is very impolite to step on the threshold as this is to step on the most revered part of

the spirits anatomy with the ones feet. Public buildings open to tourists often have the threshold covered with Plexiglas to prevent this occurrence. Many of the people are striving to obtain the possessions of Western culture, while the balance wants to remain rooted in the past.

*Thai Kaleidoscope* is seven short stories about Thailand and its people staring in Ayutthaya, the ancient capital. The former beauty and grandeur of this city was constructed by 33 kings over a period of 400 years. Founded around 1350 it was one of the richest cities in Asia by 1600. It was burned and looted by the Burmese in 1767. The remaining ruins hint at the former splendor of the many temples (wats). The Ramiyana dancers tell a story of ancient Kings and the Monkey God using highly stylized movements.

The Damnern Saduak Floating Market is located on a canal (klong), west of Bangkok. Here blue shirted ladies paddle their sampans loaded with vegetables, hats and other wares. Soup, omelets and sweet rice can be had for lunch. The klong serves as a highway for the village with many families living in houses perched on its banks. You are treated to orchids and other multi-colored tropical plants as you make our way through the market and surrounding village.

Next, you depart on the MV Fantasea from the island of Phuket for the coral reefs of the Similan islands and a pod of false orca whales. Then out into the Indian

Ocean and Burma Banks to swim with sharks and other pelagic (constantly swimming) fish. Then to Richelou Rock to experience a whale shark and cuttle fish.

Then you journey to Canchanpura for a ride on the Death Railway over the River Kwai. This railway was built by forced labor for the Japanese to bring war materials into Thailand from Burma. The cost is said to be one life per railway tie. Up North to Chiang Mai with its colorful clad residents. The story moves to the Bangkok Saturday Market and finishes in Wat Po and the Grand Palace...

All this and more will be shown at the Film Festival. The cost is free. For more information contact Wayne Russell at 603-669-7124 or Lea Nichols at 603-487-2726,

## Captain Bill's Corner

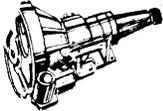

by Captain Bill Wagner

Welcome to Captain Bill's Corner, a new, regular column in which I will update you on the off shore diving scene here in New England. You will get temperature reports from very cold to not bad and visibility reports from yuck to wow!!! This will be where you can get the information needed to plan that next Isle of Shoals dive extravaganza. Alas, at this time no off shore boat dives are taking place and therefore no information is available, except that the weather, wind and water temperature is cold, but soon it'll be a different story...

Last year was an excellent year for diving off-shore (using boats). Visibility remained very good right through June and then became slightly cloudy during July and August. Seals were ever-present at Duck Island and many divers had a chance to interact with them. Marine life was at every dive, waiting for that

#### Submissions

Editorial contributions may be e-mailed to [jake@panacea.com](mailto:jake@panacea.com) or FAXed to 603-432-0817. Submissions can also be sent on paper or PC floppy to:

Jake Richter  
Editor  
*Dive Log*  
194 Winding Pond Road  
Londonderry, NH 03053

Please include a brief byline and author contact information with your submission. Submission shall automatically constitute an expressed warranty by the contributor that the material is original and is in no way an infringement on the rights of others. While no compensation is paid for published submissions, a byline indicating the source of an article will always be provided. Authors grant *Dive Log* and United Divers of New Hampshire first print rights to the submission. *Dive Log* and its editors reserve the right to edit all materials as needed. The opinions stated in the articles in *Dive Log* are those of the writers and do not necessarily reflect the opinions of the United Divers of New Hampshire or the editors of the *Dive Log*. For further information, please contact Jake Richter at 603-432-0234.

#### Membership

Annual dues for membership for 1995 in the United Divers of New Hampshire are \$25/individual or \$35/family. Dues are not prorated for members who join later in the year. To join, please contact Phil Morrison, 603-529-4361.

#### Subscriptions

Subscriptions to *Dive Log* are included in the UDNH membership fees. Non-members may subscribe to the newsletter for \$15/year. Subscription inquiries should be addressed to Phil Morrison, 603-529-4361.

#### Advertising

Rates for a full year placement range from \$75 to \$200, depending on placement size and location. For detailed information on advertising in *Dive Log*, contact Wayne Russell, 603-669-7124.

snap shot to go off and placed in an album. Flounder were abundant and Striped Bass seemed to show up every now and then.

We had several trips to the *Empire Knight* with artifacts for those that chose them [see article later in this issue about the *Empire Knight*] and plenty of marine animals for those camera shots. Video cameras showed themselves once in a while and I suspect that more divers will be taking up videography as time goes on. The *Chester Polling* was visited many times during the year and as always, it was just great. Finally, the Isle of Shoals always presented excellent dive sites throughout the dive season and had spectacular views of the islands.

That is all for now! Get your dive gear in order as soon as possible and let's get ready for another season. As always, remember to **keep on diving!**

---

## Wreck of the Empire Knight

by Christopher C. Hugo

February 11, 1944. Gale force winds blowing a blizzard lashed the Maine coast. Enroute from Saint John, New Brunswick, the 2 year old 7,244 ton British freighter *Empire Knight* was bound for India, via New York City, to pick up a convoy. With a general cargo including war supplies and a crew of 44, she was steaming right into a Nor'easter.

Around nine o'clock in the morning, Sequin Island Light, or possibly "Two Lights" Light Station at Cape Elizabeth, was spotted, but not confirmed, by those aboard the *Empire Knight* and the freighter continued along her course. Just after two o'clock in the afternoon, one mile off Boone Island, the lighted whistle buoy marking Boone Island Ledge was spotted to port

when it should have been to starboard. Somehow the storm and possibly a compass error had worked the vessel inshore. A northward course change and reduction in speed were ordered in an attempt to make open water. However, it was too late. At 2:33PM, the *Empire Knight* grounded hard on Boone Island Ledge, resisting all attempts by the crew to free her.

S.O.S. messages were dispatched and received all along the Maine coast. As the "mountainous seas" alternately lifted and dropped the stricken freighter's stern, the bow held fast to the ledge's rocky embrace. Responding Coast Guard and Navy vessels could do nothing to facilitate a rescue. A night of ferocious seas was all the *Empire Knight* could take. Shortly after 8:20AM, following an attempt to abandon ship (which ended in the swamping of one lifeboat), the freighter was seen to buckle then break 115 feet from the bow.

The stern drifted free and was swallowed by the storm, spilling men and cargo into the storm tossed seas. Rescue vessels moved in as close as they dared and wetsuited frogmen were dispatched, for life expectancy in the frigid waters was only a few minutes. It was believed the stern sank soon after breaking away, as no trace was found after an intensive search. Eventually storms broke down the stranded bow. Including the Captain, 24 seamen were lost.

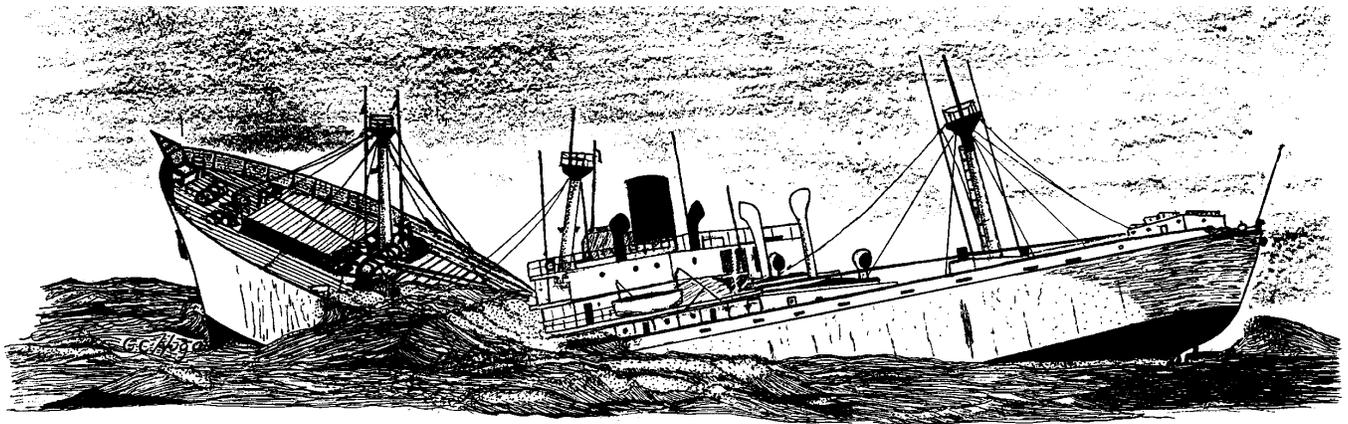

On February 17th, colors were half masted at the Portsmouth Naval Shipyard cemetery as 13 British sailors were buried with full military honors. March 1st, two more victims were laid to rest.

Launched in April 1942 by William Doxford and Sons Limited of Sunderland England, the *Empire Knight* was 428.8 feet long, 56.5 feet of beam and had a 35.5 foot depth of hold. With a registered tonnage of 7244,

...continued

she was powered by three cylinder, two stroke oil engines with a net 516 horsepower.

Ministry of Transport records listed the main cargo as: Military 2400 tons, military vehicles 2300 tons, ammunition 88 tons, government cargo 3300 tons, copper ingots 350 tons, locomotives 400 tons, whiskey 5 tons, ammonium sulfate 2000 tons, and a commercial priority of 1300 tons. No further information was given with regards to cargo classified as military, ammunition, commercial, or government.

A 1960s salvage attempt, appropriately named Empire Salvage Inc., revealed that part of the cargo of ammunition consisted of 5 inch anti-aircraft shells, warheads and separately packed detonators. These 3 foot tall brass shells were brought to the surface where the warheads were wacked off, BANG, with a ten pound sledge. The cordite propellant was cleaned out and dumped on site as were the warheads. The bottom must have dropped out of the brass market as the project sank, so to speak.

Today wreckage from the *Empire Knight's* bow lies strewn over the shoreward side of Boone Island Ledge. Atop the ledge in as little as 20 feet lies the very prow of the freighters. This discernible only from the vessel's "Navy" style anchor still hanging in its davits.

Boone Island Ledge was also the site of many other maritime disasters. Lying next to the *Empire Knight's* 20th century anchor chain, a heavily corroded 19th century chain has been found. The majority of the freighters wreckage and cargo can be seen in the 60 ft region. The vessels loading booms, shattered ventilation ducting and sections of hull are flattened against the bottom. Piles of anti-aircraft shell warheads and cordite propellant lie where dumped by Empire Salvage.

But not all of the vessel's explosive cargo was removed. Shells can still be seen pinned, if not flattened, beneath wreckage. Part of the commercial priority has been revealed to be grinding stones, and beer bottles

marked Canada 1944. Also found are truck and jeep chassis, leaf springs, batteries, differentials, radiators and the remains of a locomotive's boiler and chassis. Even a half track has reportedly been found.

The unauthorized removal of artifacts from any shipwreck on, embedded in, or under Maine state property is prohibited. The Maine State Museum, Augusta, holds title to all submerged cultural resources. The removal of material from any state owned resource is a civil violation punishable by a fine of up to \$1000.

## Sharing

*An Opinion Editorial by Lea Nichols*

One very important trait of our species is the ability to learn and adapt to new situations. Our brain is wired to make learning one of the most rewarding sensations we can experience. For many the reward is so stimulating that we crave newer and more difficult experiences to obtain this stimulation. The challenge can be mental, physical or both. A finely tuned athlete knows when they are in the groove or flow as they call it.

A diver with basic certification has the skills to operate a life support system for adventure in another world. For a while the challenge of mastering basic SCUBA skills and the thrill of looking at another world are adequate to satisfy the need for growth and learning. Eventually will follow a desire to do something more with his or her skills. If this doesn't occur then the person will likely become bored with the activity and go on to something different like tennis or hang gliding.

The down-hill skiing industry recognizes the need for growth and guidance. Ski trails are labeled according to the skill necessary to safely and enjoyably traverse

them. The skill level of the participant and environment need to be similar to provide an enjoyable experience. Too simple and the experience is boring. Too complicated and it is terrifying, painful and harmful. A skier who attempts a trail too steep and perhaps with many moguls is likely to go out of control and cause damage to himself and others who happened to get in the way or have to come to the rescue. This also damages the reputation of the ski area and those associated with it.

I feel a primary roll of our dive club is to provide the experience and guidance for growth in our sport. We operate in an inherently challenging environment with few guide posts. A diver with limited experience is unable to perceive much of the hidden beauty and the peril of the underwater world. I sense that the club has lost sight of or is unaware of the on-going need for training and guidance in our sport. It is most critical for the beginning diver, but applies at all levels.

In the past, the Club's Dive Master shouldered some of this responsibility. Recently the responsibility of the Dive Master has been reduced to that of social director. The underlying concept being that every one is responsible for their own actions. In practice this results in divers taking on unnecessary risk probably resulting in an unpleasant experience. I've seen it happen too many times.

Usually it doesn't happen because the persons involved are reckless, but because they just didn't know any better. As part of the human growth process we search out and adapt to ever more complex situations. Sometimes we lose sight of the struggle it took to reach our level of competency. This causes problems when one member of a dive team is much more experienced than the other. Husband / wife teams are the most frequent offenders. Next in line are parent / child teams. We

need to learn to recognize that our partner's comfort zone is different than our own. We need to take care not to lure new divers into environments that they are not qualified to handle. This puts the diver, his dive mates and the club unnecessarily at risk. This all can be greatly reduced with some forethought.

Laying this responsibility all on the Dive Master may not be a solution but we can't just pretend the need doesn't exist. The sport of downhill skiing has the National Ski Patrol. They keep an eye out for reckless behavior that is dangerous to the perpetrators and those in the line of fire. I feel the safety and survival of United Divers of New Hampshire turns on the ability of our organization to provide learning and guidance to members at all skill levels.

While driving through Boston recently I encountered a relevant slogan something to the effect "Don't be afraid to stand up for your beliefs, but don't think they represent the only perspective." I am most interested in discussing the above outside of the club business meeting. Feel free to call me at home or talk about it during a regularly scheduled decompression stop after a meeting. I hope to formulate a plan for submission to the board before this subject comes up for vote at the end of the year.

Respectfully, Lea Nichols  
[Lea can be reached at 603-487-2726]

**The New England Aquarium's  
1995 Spring Lowell Lecture Series:  
The Open Ocean**

**What is it and why we should care?**

The open ocean is the largest and most important ecosystem on Earth. What happens in the open ocean has a profound effect on what occurs in terrestrial and

atmospheric systems. Pollution, over-harvesting of fishery resources, and global environmental changes like ozone depletion and global warming today are changing the open ocean ecosystem faster than it can compensate. The New England Aquarium's 1995 Spring Lowell Lecture Series will offer a look at this vast arena of life so we can understand its importance to the future of life on our ocean planet.

Talks are Thursday evenings at 7:45 PM in the Aquarium's auditorium, except for a Special Earth Day presentation by Sylvia Earle on Saturday evening, April 22, also at 7:45 PM. Each presentation is free and open to the general public thanks to the support of the Lowell Institute. Advance tickets are available by sending a self-addressed, stamped envelope indicating the lectures of your choice and the number of tickets requested. Advance ticket holders will be seated first, followed by non-ticket holders. Early reservations are advised.

Please mail reservation requests to:

***Climate and the Oceans: A Key To Understanding The Future Of The Planet***, by James E. Price, Senior Scientist, Woods Hole Oceanographic Institution

The moderate climate we experience in coastal New England and in Europe is due in large part to the way that the oceans store and transport heat. Sometimes the ocean's heat transport changes, as it does during an El Nino event, triggering disruptive climate changes beyond human control. We may be able to forecast these climate changes well in advance if we first learn to monitor and forecast the oceans themselves.

***Among Whales: A Journey of Discovery***, by Roger Payne, President, Whale Conservation Institute

Celebrated whale biologist Roger Payne introduces his most recent book *Among Whales*. *Among Whales* has been called a fresh and original work of biology and is a journey of discovery about the problems faced by whales and humans together.

## Creature Feature

by Philip Morrison

### Red-gilled Nudibranch - *Coryphella* sp.

Regardless of the activities they do, most divers will tell you that the main reason for diving is to experience the wondrous diversity of aquatic life. And you don't have to go to warm tropical waters to experience a tremendous diversity. New England waters are rich with sea life of a myriad different forms. If you are one of those who receives satisfaction from merely observing marine life, do you have one (or more) that are your favorites? If I had to select a favorite marine creature it would almost certainly be the nudibranchs.

What exactly are nudibranchs? Well, essentially, they are sea slugs. I know what you're thinking: "slugs are your favorites?" Don't get these creatures confused with your normal terrestrial slugs though. These creatures are considered by many to rank among the most spectacular and beautiful mollusks.

Just like the terrestrial slugs, nudibranchs are Gastropods and are closely related to the snails. Unlike the snails, however, they do not have a shell. What makes them distinctive is that most possess cerata (protrusions which function as gills and the digestive tract) of varying sizes and shapes covering the dorsal body surface. These are usually brilliantly colored and commonly are red, yellow, orange, blue, or green, or some combination of colors.

The group of creatures called nudibranchs cover several genera. Several of these can be found in New England. The most common nudibranch found in New England waters appears to be the Red-gilled nudibranch (*Coryphella* sp.). It also happens that it is one of the most colorful as well. There are actually several

species that share the name of Red-gilled nudibranch.

So just what do these creatures look like? For one thing, they are very small. Red-gilled nudibranchs generally only reach a size of about 1 3/16" in length. The red-gilled nudibranch comes in a variety of colors. The body can vary from translucent to opaque-white or yellowish-white. The most distinguishing feature, however, is the mane of cerata which are varying shades of red and are ringed or tipped with white.

Red-gilled nudibranchs can be found on a variety of habitats, from seaweed to rocks. They are frequently found near hydroids, their principal prey. One interesting fact about these creatures is that they can apparently acquire the stinging cells of the hydroids they consume and use them for their own defense.

The key to locating these fascinating creatures is to think small and move very slowly! Remember, they are very small so it is easy to overlook them. From my personal experience, they are most often found on vertical rock faces. Pay particular attention to rock faces where there is an abundance of hydroids. However, they can also be found riding the fronds of seaweed as they sway in the current. In addition to being small, they are also frequently solitary. Occasionally you will see several individuals sharing the same rock face. However, in my experience, congregations of more than 4 to 6 individuals appear to be rare. Therefore, you have to be pretty observant to locate one or two individuals on a large rock face.

Another means of locating these creatures is to find their egg masses. Red-gilled nudibranchs lay a characteristic spiral egg mass. These look like spider webs adhering to the rock faces and can usually be seen more

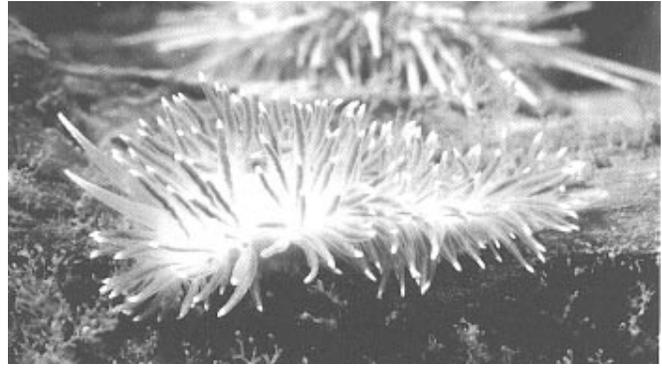

Photo provided courtesy of Andrew Martinez, via his book, *Marine Life of the North Atlantic*, available for \$29.95 plus \$4.00 S&H from N.A. Marine Life, P.O. Box 335, Wenham, MA 01984.

readily than the nudibranch itself. If you do locate one, look closely. You will frequently find an adult in the vicinity. Later in the season, you may also see several juveniles.

Don't forget, though, that red-gilled nudibranchs are not the only species of nudibranchs found in our area. There are several other species that occur from Canada to Massachusetts. And they are just as fascinating to observe as these. So next time you go diving, keep your eyes open and you may just see what, in my opinion, are some of the most beautiful and fascinating animals inhabiting New England waters.

## NUBBLE LIGHT

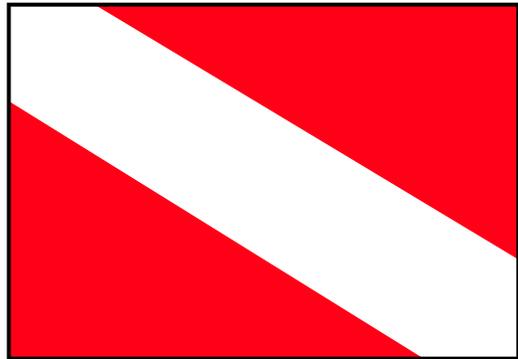

by Dave Ayotte

Located at the end of Cape Neddick in York Maine, lies a small island known to fishermen as the "Nubble" and on it stands Nubble Light House. Built in 1879 Nubble light has stood guard over York harbor for over a century. The picturesque beauty of the lighthouse standing on its rocky perch with waves crashing around it, has made Nubble one of the most photographed lighthouses in the country. There is something else that draws attention to Nubble Light; SCUBA divers! Nubble light is probably the most popular shore dive in the Northeast. On any given weekend through the summer, sight seers from all over, come, not only to view the lighthouse, but to watch the divers. Fascinated by what they see, many divers have been drawn to SCUBA by simply having watched others enjoying their dive at the Nubble. With depths ranging from 20' near shore to over 80' on the seaward side of the island, Nubble offers a wide variety of diving for all experience levels. Entering on the north side will reveal a vertical wall dropping off to 25' decorated with frill anemone, starfish, and sea urchins. Along with several small residents, it offers a colorful view of New England aquatic life. As you swim further out towards the center of the cove, depth will increase gradually to about 40'. Along the bottom you will find rocks that seem to be alive with anemone, urchins and starfish, sculpin, sea raven, lumpfish as well as lobsters moving in and out among the rocks. Swimming to the right about 30 yards you will come across a sandy bottom, playground to flounder, skate, moon snails and crabs. As you swim along the island you will see some rock formations that create a home for cod, cunner and pollock along with a wide variety of marine plant life.

Night Diving is another popular activity at the Nubble, with good shore lighting and the glow of the lighthouse beacon, night dives are nothing less than spectacular. In August schools of squid visit the cove at night and for the patient diver will dance in and out of the light beam, like playing a game of hide-and-go-seek. Divers Den frequently offers group night dives to the Nubble during the summer months.

There are some restrictions to diving Nubble Light. Divers are required to have a permit from April 1st to Oct. 31st. The permit is available at the York Police Dept. at no charge. There is also no diving allowed on Sundays or Holidays during the permit dates. Nubble has been a popular dive site for over 40 years and we hope that it will continue to be for many more years. So when you dive the Nubble respect the environment, carry out what you carry in and have fun.

## Meetings and Events

### April 17 - Meeting

- Dick Kurisko of Divers Den, founder of UDNH, will present 30 years of diving - some of the gear, gizmos, and early methods and training.
- Pool time - swim and underwater hockey.

### April 27 - Event

- Underwater Slide Presentation, sponsored by New England Underwater. 7pm at Dana Hall at St. Anselm's College, Manchester. Cost: Free. See article in this issue for more information.

### May 1 - Meeting

- Dry suits by Viking. What's new? How to fit? Try and buy!
- Pool time - try out the Viking dry suits with professional guidance!

### May 13 - Event

- Dive with a Viking Dry Suit demo day. Try a Viking Dry suit in the ocean, at 9:30AM at Great Island Common, Newcastle, New Hampshire. You must RSVP with Wayne Russell for this event at the May 1st Meeting.

### May 15 - Meeting

- Dive Site First Aid presentation by our own EMT, Phil Morrison. Explore hidden dangers, fixes, field first-aid, treatment and prevention.
- Pool time - Water safety - rescue and risk management.

### June 5 - Meeting

- Ron Watson of the New England Aquarium "Senior Volunteer Staff" tank diver - 17 plus years diving the Great Ocean Tank. Come and hear and see what it's been like to work every week in a premiere aquarium.
- Pool time - swim and underwater hockey.

### June 10 - Event

- Club Dive at Fort Foster in Kittery, Maine. Open to divers of all experience levels. New divers are welcome and will be matched with experienced buddies. Enjoy the day and bring a picnic. 10AM to 4PM.

### June 19 - Meeting

- Presentation - To be announced

### June 23 - Event

- Club Night Dive at Nubble Light in York, Maine. Join the club at dusk here for a great area night dive. Open to divers of all experience levels.

### July 17 - Meeting

- Presentation - To be announced.

### Club Meetings

Meetings are held the first and third Mondays of each month, except for January, November, and December. We encourage potential members to attend a meeting or two to experience our club before joining. The meetings are held at the YMCA on 30 Mechanic St. in Manchester. The meetings start at 7:16 PM. Each meeting consists of a short business portion followed by a variety of presentations and discussions. Immediately following the club has an hour of pool time for swimming, trying out gear, and the occasional game of underwater hockey. Members and guests often meet afterwards at a local restaurant for food and drink.

### Extreme Weather

Meetings will be held if the YMCA is open. You can call them at 603-623-3558. Check close to the meeting time as the front desk often has no advance warning of early closures.

### Get in the Swim

After every meeting, the YMCA pool is open to our dive club for an hour of fun and fitness. Join our lap swimmers in the great race to swim the most miles! Or dive into a pick up game of underwater hockey.

Don't wait for the ice to thaw before trying out that new equipment, the pool is the perfect place. Check out the club calendar for special presentations in the pool like dive knife use or try out a dry suit.

So bring a suit and a towel to every meeting and get into the swim.
